

**Amendments to the Specification:**

Please replace the paragraph beginning at page 22, line 12, with the following rewritten paragraph:

In operation, the drawer guides 600 may be positioned on the inner surface of the left and right side panels to accommodate a combination of various sized drawers to fill the drawer cabinet by sliding the locking posts [[600]] 610 into the apertures 318 until the spring-tab 114 engages the left or right side panel. The result is a mechanically secure inter-fitting engagement between the guides and the panels. The design allows the drawer guides to be connected to the panels without the need for separate fasteners.
